

Update to Rate for January 1, 2024

Attention ESRD Providers:

Effective for **dates of service January 1, 2024 and forward**, Wyoming Medicaid will reimburse End Stage Renal Disease (ESRD) facilities at the lesser of:

1. The provider's billed charges for the service, or;
2. The State-developed bundled treatment rate.

The Wyoming Medicaid State-developed per-treatment payment rate will be determined annually by the Wyoming Department of Health Medicaid.

The State-developed rate is the average Medicare projected per-treatment amount calculated, using data from the most recent Final ESRD PPS Facility Level Impact File, which contains calendar year payment projections by provider under Medicare's PPS.

The calculation consists of dividing the total Estimated Medicare Allowable Payments by the total Number of Dialysis Treatments for all Wyoming dialysis centers in the file. The total Estimated Medicare Allowable Payments include the updated base rate, outlier payments and updated wage index values.

The current State-developed rate for calendar year 2024 is \$307.47 per treatment. Please make this adjustment to your systems or it will continue to pay the lower rate.

For questions or concerns, contact Amy Guimond at amy.guimond@wyo.gov or 307-777-3427.

Deployment Information

Deployment Date: January 17, 2024

Audiences: End Stage Renal Disease (ESRD) providers
